**ABSTRACT**

This study aims to find out how the process of preserving library materials at the Jembrana Regency Library and Archives Service is and to find out what obstacles are experienced by libraries related to the library material preservation process at the Jembrana Regency Library and Archives Service. The type of research used by the author is descriptive qualitative and the technique of determining information is purposive sampling and is snowball. This research is located at the Department of Library and Archives of Jembrana Regency. The methods used in data collection are observation, interviews and document studies. The results showed that the preservation of library materials at the Department of Library and Archives of Jembrana Regency was carried out by means of preventive (prevention) and also curative (remedial). For the constraints of the preservation of library materials at the Department of Library and Archives of Jembrana Regency, namely the lack of human resources who handle the field of preservation and the lack of places to carry out preservation activities.
