**ABSTRACT**

Physical activity during the Covid-19 pandemic still needs to be done so that the body is healthy and fit. The purpose of this study was to obtain empirical data on the level of discipline of volleyball and basketball athletes during the adaptation period of new habits in the Buleleng Regency. This descriptive study uses simple random sampling, the number of samples of volleyball athletes is 48 people and basketball athletes are 60 people. The research instrument is in the form of a closed questionnaire in the google form. Data analysis used quantitative-qualitative descriptive. The results showed: 1) volleyball athletes who were included in the very disciplined category were 16 people (49%), the discipline category was 25 people (52%), and the fairly disciplined category reached 7 people (15%). The average score of volleyball athlete respondents reached 99.31, and 2) basketball athletes in Buleleng Regency included in the very disciplined category as many as 29 people (48%), the discipline category amounted to 24 people (40%), the moderately disciplined category reached 7 people (12 %). Based on data analysis and discussion, the conclusions of this study are: 1) the level of discipline of volleyball athletes in Buleleng Regency is included in the discipline category, and 2) the level of discipline of basketball athletes is included in the discipline category. It is recommended to the people of Buleleng Regency to continue to do physical activity by implementing strict health protocols, taking regular breaks, and maintaining a healthy body.
