***ABSTRACT***

*This research was the aim of 1) analyzing the damage to the biotic environment in the coastal area of Jembrana Regency, 2) analyzing the abiotic environmental damage in the coastal area of Jembrana Regency. The design in this study is a descriptive design. Data were collected by interview, observation, and document mutilation methods from key informants who were selected purposively. Data were analyzed using qualitative methods. The results showed that 1) The biotic environmental damage in the form of coastal abrasion, the worst occurred in Melaya District, and the lowest occurred in Pekutatan District, 2) The worst abiotic environmental damage that occurred on the coast of Jembrana Regency occurred in Negara District which sourced from the fish canning industry, garbage. Households, the results of religious ceremonies and community behavior and the lowest occurred in Pekutatan District which was influenced by the presence of residential areas far from the coast.*

***Keywords:*** *Environmental Damage, Coastal Abrasion, Marine Pollution*
