online learning. Third, the teachers also have great action of Google Classroom in online learning.

5.3 Suggestion

There are several suggestions based on the result of the study, and they can be described as follows:
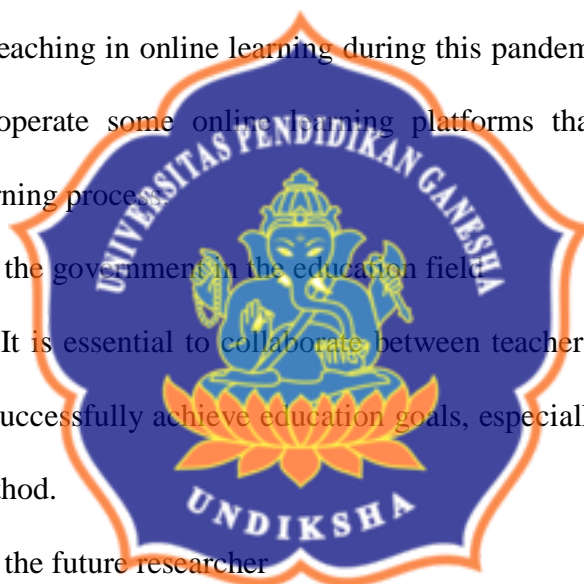

1. For the teachers

    The teachers need to enhance and develop their knowledge and technology literacy by participating in a seminar or workshop related to teaching in online learning during this pandemic, especially on how to operate some online learning platforms that support the online learning process.

2. For the government in the education field

    It is essential to collaborate between teachers and the government to successfully achieve education goals, especially in the new learning method.

3. For the future researcher

    This research emphasized only the teachers' perceptions toward the use of Google Classroom in online learning on junior high in Bogor. Since this study only focused on teachers' perception, it is suggested to conduct the study about effect of implementing Google Classroom in online learning.
