Appendix 2. Population per Class

The determination of the sample size in this study was obtained based on the Slovin formula. The formula for calculating the sample size from the population is:

$$n = \frac{N}{1 + (N \cdot e^2)}$$

Information :

n : sample size

N : population size

e : error rate (in this study, researcher set an error limit of 0.05).

So, the minimum number of samples in this study as follows:

$$n = \frac{468}{1 + (468 \cdot 0,1^2)}$$

$$n = \frac{468}{2,17}$$

$$n = 238$$

To avoid the occurrence of samples that drop out and as a backup, the researchers added 10% of the minimum sample size. So, the total sample in the study is 238 people

Appendix 3. Sample

To obtain a representative sample, the subject of each class is determined in proportion to the number of students in each class. According to the formula developed by Issac and Michael (Sugiyono, 2017), the number of samples in each class is calculated by the formula:

The number of samples in each class is calculated by the formula:

$$ni = \frac{Ni}{N} \times n$$

Information:

ni : number of samples

Ni : total population of each class

N : total population (468 people)

n : sample size (238 people)
