- WHO. (2023a). *Preterm birth*. An estimated 13.4 million babies were born preterm in 2020 (before 37 completed weeks of gestation) (1). Preterm birth complications are the leading cause of death among children under 5 years of age, responsible for approximately 900 000 deaths in 2019 (2). Three-quarters of these deaths could be prevented with current, cost-effective

interventions. Across countries, the rate of preterm birth ranges from 4–16% of babies born in 2020.
