Perihal : **Permohonan Izin Penelitian**

Yth. Kepala SMA Negeri 2 Singaraja
di Singaraja

Dalam rangka pengumpulan data untuk menyelesaikan Skripsi/Tugas Akhir, dengan hormat kami mohon agar Bapak/Ibu mengizinkan mahasiswa di bawah ini:

Nama	: Komang Apriani
NIM	: 2112021051
Jurusan	: Bahasa Asing
Program Studi	: Pendidikan Bahasa Inggris
Jenjang	: S1
Tahun Akademik	: 2023/2024
Judul	: Penelitian Terhadap Coherence dan Cohesion Pada Teks Paragraf Siswa Kelas XI di SMA Negeri 2 Singaraja

untuk mencari data yang diperlukan pada institusi yang Bapak/Ibu pimpin. Atas perhatian dan bantuan Bapak/Ibu, kami ucapkan terima kasih.

a.n. Dekan,
Wakil Dekan I,

Dr. Ni Luh Putu Eka Sulistia Dewi, SPd., MPd.
NIP. 198104192006042002

Tembusan:

1. Dekan FBS Undiksha Singaraja
2. Kaprodi. Bahasa Asing
3. Sub Bagian Pendidikan FBS

Green Future

Currently, the issue of climate change and environmental damage has become a serious problem. If we don't take action, our planet could be destroyed. Therefore, we must start taking action to prevent that from happening.

Firstly, being greener doesn't have to be difficult or expensive. Starting from ourselves first by doing small things such as planting trees or plants around our house or environment. With small changes in lifestyle we can contribute significantly to preserve the earth.

Secondly, apart from that, we can also implement a green lifestyle at school. For example, reducing paper use, saving energy, and recycling waste. We can also invite our friends to take environmental action, such as cleaning the environment and planting trees.

Third, maybe you think it's useless, but it has a big impact, and we will also feel comfortable when we are in the surrounding environment. We can make changes from ourselves. If everyone does things like us, the impact will be very big on our earth.

Let's take a go green movement for a green future. So that the next generation can experience a beautiful life and beautiful earth.

Let's Go Green

Nowadays, Global Warming is no longer a problem. We always feel hot in the afternoon and very cold after the rain. We cannot predict whether the weather will be sunny or rainy. The weather can change so quickly and extremely, in the morning it can be sunny and in the afternoon it suddenly rains. Of course, this condition is not very good for health, especially stamina and the immune system.

Nowadays, we are in a modern era, we can do everything easily. Someone who is irresponsible without thinking about environmental balance, they can throw their rubbish into places that are important for nature such as rivers, sea, air, etc. Waste that is thrown away has a very negative impact on survival. There is pollution everywhere and people cannot carry out their activities properly.

We can prevent global warming right now. Of course we don't want to be in bad conditions for a long time. Start with our school. Let's make school green! If we see trash we have to throw it in the trash. And we can also plant trees, flowers or grass in every empty area in our school. So we can feel fresh and cool when studying and the views are beautiful.

What if we reduce the use of plastic

In this time, plastic waste still be unresolved problem in Indonesia. This is because Indonesia society has habit to use plastic in their activity. This also happens because awareness regarding the negative impacts that plastic waste bring is still lacking. The negative impact of using plastic continuously we will definitely feel it if we do not reduce to use plastic.

First, plastic waste is difficult to decompose so this disrupts soil fertility. This can make the plants around us die and the view is not beautiful. Plastic waste also can ~~block~~ block the water infiltration.

Next, toxic chemical compound contained in plastic can endanger to our health. Chemical compounds contained in plastic can enter to human body through food and ~~drink~~ drink that has been polluted by plastic waste.

Beside that, the use of plastic can be replaced with other alternatives to help our daily activities. For example, when we carry groceries, we can use a shopping bag.

To maintain the well-being of our precious lives, we as the next generation will maintain and preserve environment around us. We can change small habits by reducing the use of plastic to avoid bad impacts and continue to live healthily.

" Saving Electrical Energy "

The use of electrical energy will have a bad impact on our walls also on the surrounding environment. Therefore, we must try to reduce or save electrical energy.

Excessive use of electrical energy will have an impact on fossil fuels. So that increasing the amount of carbon dioxide and other gases will have a negative impact on the environment. Therefore, we can save energy to help reduce greenhouse gas emissions due to climate change.

Saving electrical energy can also reduce the burden on the electricity grid to build new power plants. This not only saves natural resources, but also reduce infrastructure cost born by the government and society.

Saving electrical energy can also save us personal electricity bills. By implementing habits such as turning off lights and electronic devices when not in use, and saving money that is usually used to pay electricity bills.

Saving electrical energy is a simple action, however, it has a big impact on the environment and our finances. By implementing energy saving habits we can contribute to preserving the environment. Therefore, let us all save more energy for a better future.

The Dangers of Littering

Thesis => A lot of trash is produced every day, so the people must find the manner how to manage the trash they have, because a lot of people can not execute the trash as well. A lot of trash cause many problem for the outlines.

Argument 1 => Firstly, the trash from housekeeping can be like organic trash or not organic. If someone find organic trash, what they can do is to appoint the trash like artificial manure, because if the organic trash is not executed as well it can cause a bad smell, however if they find not organic trash they must manage the trash as well for example non organic trash can be reduced, reused and recycled again. If someone can not manage the organic trash it can make dirty outline.

Argument 2 => Secondly, a lot of people can not manage the trash as well. Usually, a lot of people often throw away the trash in river, beach, sea, lake, and in the gutter. The trash on the water disturb very much the activity a human in the world. The gutter of the river is full of trash can make a big flood when the rain comes. Big flood is very dangerous for the people because a big flood can immerse the houses of people, motorcycles, cars, and the children only. For example the gutter in Srikanth street, Simbangor Singarane was full of non organic trash during flood.

Argument 3 => Thirdly, the trash is not managed as well it can bring a lot of disease. The more of trash is there and

then many maggots and bacterial multiply. For example if rain comes a lot of mosquito are alive because there are many pond of water. It is for sure, and then the dengue can not be controlled.

Recommendation => Throw away only harm our selves, many bad effect are because of the trash. Therefore all of people must manage the trash start from littering and not use plastic too much and if you want life to be comfortable and healthy then the habit to throw away the trash must be stopped, and you must begin to care about the outline.
