Penelitian ini bertujuan untuk mengetahui peran model pembelajaran inkuiiri *google classroom* pada pelajaran biologi untuk meningkatkan keterampilan proses sains siswa kelas X MIPA di SMA Negeri 1 Sukasada. Jenis penelitian ini adalah pra-eksperimental dengan desain penelitian *one group pretest-posttest*. Lokasi penelitian ini di SMA Negeri 1 Sukasada, Kecamatan Sukasada, Kabupaten Buleleng. Pengambilan sampel penelitian dilakukan dengan teknik *simple random sampling*. Berdasarkan hasil pengundian, terpilihlah kelas X MIPA 1 yang akan menjadi sampel penelitian, dengan jumlah siswa sebanyak 28 siswa, dengan jumlah siswa perempuan 12 orang dan siswa laki-laki sebanyak 16 siswa. Analisis data dilakukan dengan menggunakan uji *N-Gain* digunakan untuk mengukur seberapa besar keterampilan proses sains siswa setelah dilaksanakan pembelajaran. Hasil penelitian ini menunjukkan bahwa nilai *pre test* dan *post test* berbeda bermakna dengan nilai $p = 0,0001$ ($p < 0,05$). Sehingga hasil ini menyatakan model pembelajaran inkuiiri berbasis *google classroom* pada pelajaran biologi meningkatkan keterampilan proses sains siswa kelas X MIPA di SMA Negeri 1 Sukasada yang ditunjukkan dengan skor keterampilan proses sains sebesar 1 berada pada interval (g) $\geq 0,7$ kategori tinggi. Disimpulkan bahwa penerapan model pembelajaran inkuiiri berbasis *google classroom* pada pelajaran biologi terbukti dapat meningkatkan keterampilan proses sains.

This study aims to determine the role of the google classroom inquiry learning model in biology lessons to improve the science process skills of students of class X MIPA in SMA Negeri 1 Sukasada. This type of research is a pre-experimental research design with one group pretest-posttest.. The location of this study was in all class X in SMA Negeri 1 Sukasada, Sukasada district, Buleleng regency. The research sample was taken using simple random sampling technique. Based on the results of the draw, class X MIPA 1 was chosen as the research sample, with 28 students, with 12 female students and 16 male students. Data analysis was performed using the N-Gain test used to measure how much the students' science process skills were carried out after learning. The results of this study indicate that the pre-test and post-test values were significantly different from the value of $p = 0.0001$ ($p < 0.05$). So these results state the google classroom-based inquiry learning model in biology lessons improves the science process skills of grade X MIPA students in SMA Negeri 1 Sukasada as indicated by the science process skills score of 1 at the high interval (g) 7 0.7 categories. It was concluded that the application of the google classroom-based inquiry learning model in biology was proven to be able to improve science process skills.
