ABSTRAK

Tujuan dari penelitian ini ialah untuk mendeskripsikan dan menjelaskan profil literasi lingkungan siswa SMA se-Provinsi Bali secara umum, berdasarkan jenis kelamin, lokasi tempat tinggal, dan pendidikan orang tua. Dimensi dalam tes literasi lingkungan yang digunakan ialah pengetahuan (15 item), perhatian (15 item), sensitivitas (16 item), sikap (9 item), dan perilaku (8 item). Penelitian ini tergolong penelitian *ex post facto* dan pengumpulan data dilakukan dengan metode survei yang dilakukan secara daring untuk mengumpulkan data. Sampel yang digunakan dalam penelitian ini berjumlah 450 siswa yang diperoleh dari perwakilan 50 siswa di tiap kabupaten/kota yang ada di Bali. Data dalam penelitian ini dianalisis menggunakan *t-test Independent sample* dan ANOVA-satu jalur. Hasil pengujian deskriptif menunjukkan siswa memiliki tingkat sensitivitas dan perhatian yang tinggi pada lingkungan. Secara umum, tingkat literasi lingkungan siswa SMA di Provinsi Bali tergolong tinggi. Selain tingkat literasi lingkungan secara umum, hasil yang diperoleh dalam penelitian ini ialah (a) terdapat perbedaan tingkat literasi lingkungan yang signifikan antara siswa laki-laki dan siswa perempuan, dengan tingkat literasi lingkungan siswa perempuan lebih tinggi daripada laki-laki; (b) terdapat perbedaan tingkat literasi lingkungan yang signifikan antara siswa yang tinggal di desa dan siswa yang tinggal di kota, dengan tingkat literasi lingkungan siswa yang tinggal di kota lebih tinggi dibanding siswa yang tinggal di desa; (c) terdapat perbedaan tingkat literasi lingkungan yang signifikan antara siswa yang orang tuanya tidak sekolah, lulusan SD, lulusan SMP, lulusan SMA, dan lulusan perguruan tinggi, dengan siswa yang ayahnya lulusan perguruan tinggi dan ibunya lulusan SMP memiliki tingkat literasi lingkungan yang lebih tinggi dibanding dengan yang lainnya.

ABSTRACT

The purpose of this study was to describe and explain the environmental literacy profile of high school students in Bali Province based on gender, location of residence, and the last education of parents. The indicators that were used in the environmental literacy test were knowledge (15 items), concern (15 items), sensitivity (16 items), attitudes (9 items), and behavior (8 items). This study was classified as an ex post facto research with online survey method to collect data. The sample used in this study amounted to 450 students obtained from representatives of 50 students in every regencies/city in Bali. Data in this study were analyzed using independent sample t-test and one-way ANOVA. Descriptive analysis showed that students had high degrees of concern and sensitivity toward the environment; however, they had moderate levels of environmental knowledge. Generally, the environmental literacy of high school students in Bali was high category. Beside the general level of environmental literacy, the results in this study indicated that (a) there was significant effect of gender on students environmental literacy between male and female students, the level of environmental literacy of female students were higher than male students ; (b) there was a significant difference in the level of environmental literacy between students living in villages and students living in cities, the level of environmental literacy of students who lived in cities were higher than students who live in villages; (c) there were significant differences in the level of environmental literacy among students whose parents were not in school, primary school graduates, junior high school graduates, high school graduates, and college graduates, with students whose father graduated from college and whose mother graduated junior high school has a higher level of environmental literacy than the others.

Keywords: environmental literacy, gender, location of residence, the last education of parents
