Setiap kehamilan sering terjadinya perubahan fisik ataupun psikologis terutama pada Trimester III salah satunya sering kencing. Penyebab sering kencing yaitu perut yg semakin membesar menekan kandung kemih yg menyebabkan selalu ingin berkemih. Jika tidak diatasi dapat mengganggu kenyamanan ibu hamil. Pada penyusunan laporan metode yang digunakan yaitu jenis deskriptif dengan pendekatan studi kasus dari asuhan yang sudah dilakukan, didapatkan ibu mengalami keluhan fisiologi pada masa hamil sampai nifas sehingga perlu diberikan asuhan yang komprehensif mencegah terjadinya komplikasi pada kehamilan, persalinan sampai nifas 2 minggu pertama dengan subjek penelitian yaitu perempuan "NE" G1P0A0 UK 38 minggu 2 hari dengan masalah mengalami keluhan sering kencing di PMB "PA" di Wilayah Kerja Puskesmas Buleleng II. Asuhan kebidanan secara komprehensif pada perempuan "NE" selama kehamilan trimester III UK 38 minggu 2 hari dengan keluhan sering kencing tidak ditemukan adanya komplikasi saat kehamilan, pada persalinan dengan spontan belakang kepala dan masa nifas mengalami keluhan fisiologis dan sudah diberikan asuhan sesuai dengan keluhan yang dialami. Asuhan pada perempuan "NE" UK 38 minggu 2 hari dengan keluhan sering kencing sudah dapat diatasi. Maka dapat disimpulkan bahwa asuhan ini sesuai dengan kasus.

Kata Kunci : Kehamilan, Sering kencing

ABSTRACT

Comprehensive Midwifery Care for “NE” Women at PMB “PA” in the Work Area of the Buleleng II Health Center in 2021
