## ABSTRACT

### **“Comprehensive Midwifery Care for “LS” Women at PMB “GA” in the Work Area of the Seririt II Public Health Center, Buleleng Regency in 2021”**

Every pregnancy does not always go normally or without complaints. One of the complaints that can cause discomfort in TM III pregnant women is frequent urination. Complaints of frequent urination is a result of the pressure of the uterus forward causing the bladder to feel full quickly and urinate frequently. The purpose of this study was to provide comprehensive midwifery care to “LS” women starting with 36 weeks of 3 days of pregnancy, maternity, postpartum and newborn babies.

The author takes data by means of interviews, observation, physical examination, documentation and literature study. The subjects in this care are female “LS” G2P1A0 UK 36 weeks 3 days with complaints of frequent urination in PMB “GA” in the Work Area of the Seririt II Public Health Center, Buleleng Regency 2021.

Comprehensive midwifery care for “LS” women during the third trimester of pregnancy with complaints of frequent urination, no complications were found during pregnancy, labor proceeded normally and partograph writing was complete, the baby had no problems, the postpartum period was physiological. During pregnancy and the puerperium the mother should receive standard 10 T examination care.

During the third trimester of pregnancy, “LS” women complained of frequent urination and the gaps were not resolved. In childbirth, there was a gap between theory and the field when the baby was born and the delivery of the placenta, during the puerperium KF 1 and KF 2, there were no gaps. . There is no gap in care for newborns, namely KN 1 and KN 2 have been carried out according to schedule and weight is weighed at each visit.
